

The European Biofuels Technology Platform

The Biofuels Technology Platform aims to implement the major proposals outlined in the vision report 'Biofuels in the European Union – a vision for 2030 and beyond', of the Biofuels Research Advisory Council that presents a long-term view on how to overcome the technical and non-technical barriers for biofuel deployment in the European Union and worldwide.

The European Biofuels Technology Platform is a focused initiative in the frame of research on renewable energy sources. It aims to develop cost-competitive, world class biofuel technology, contribute to the creation of a European biofuels industry and accelerate the deployment of biofuels.
